## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

This is an office action for serial number 10/726133,  
entitled Bracket For Clotheshorse, filed on December 1, 2003.

*Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which  
forms the basis for all obviousness rejections set forth in this  
Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being  
unpatentable over Loebner 3,503,525 in view of Hanson D 261,571.  
Loebner discloses a plate (20) having a top and multiple side  
edges, multiple first receiver members similar to collars (where  
20a and 20b are received), vertical socket (18), the plate  
having a fan-shape with arced upper edge at the top edge (edge  
near 20A and 20B received; see attached figure), second collar  
(near 20C), inner opening with edges. Hansen (see attached  
figure) discloses a plate having multiple first collars  
communicating with multiple slots and including multiple flanges  
on an inner opening, top edge and multiple side edges of the  
plate. It would have been obvious to one having ordinary skill

Art Unit: 3632

in the art to have modified Loebner to have included the multiple collars communicating with multiple slots; multiple flanges on the inner opening, top edge and multiple side edges of the plate as taught by Hanson for the purpose of providing a more secure attachment of the members. The flanges would provide strengthening and reinforcement to the plate. The collars would provide the plate with a means of stability for the tubes therefore helping to prevent detachment. The multiple slots would provide easy access to the collars when inserting a railing, post, or pole.

#### *Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The prior art discloses conventional shelf supports and conventional racks for clothing.
